Hestaplan for breeding

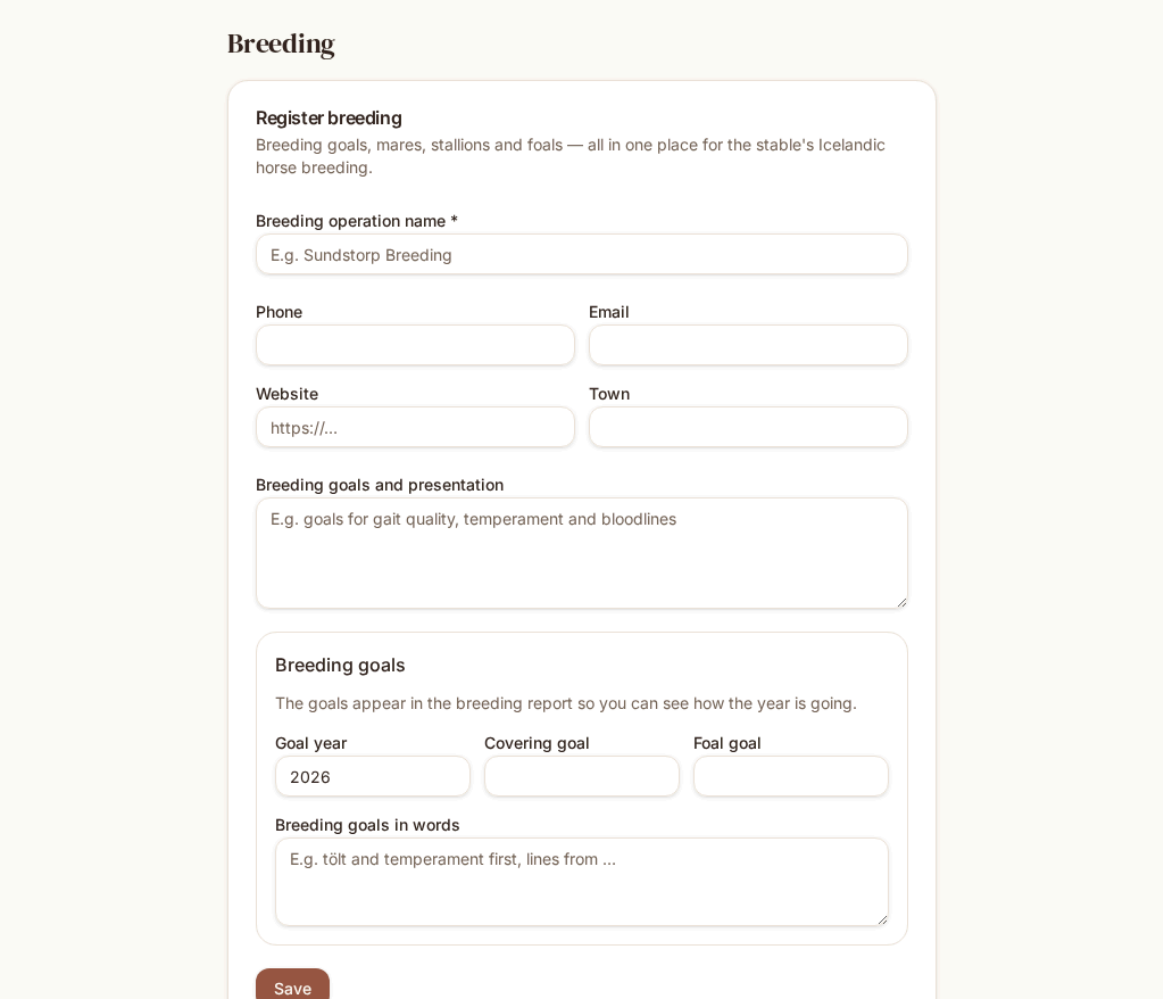

For you who breed Icelandic horses — breeding goals, planning and follow-up in the same app as the stable routine.

Breeding gets its own track in Hestaplan, next to the stable and the business. Collect your breeding goals, plan the year in the breeding calendar and follow up in the reports — all linked to the stable's horses.

- Breeding profile with goals for coverings and foals
- Breeding calendar for planning the year
- Reports that show how the year went against your goals
- Several owners can share the responsibility for breeding

1. Collect your breeding goals

Register the breeding operation with name, contact and presentation. Set this year's goals for coverings and foals — the goals appear in the breeding report so you can see how the year is going, in numbers and in words.

The breeding profile — goals, presentation and the year's plan.

Screenshots use fictional, anonymised examples.

2. Calendar and reports

In the breeding calendar you add the year's events: coverings, pregnancy checks, births and assessments — with the same reminders as in the stable calendar. The reports summarise the year against the goals, so you follow up without digging through reminders and notes.

Getting started

Breeding is added as an add-on to your stable. Register the breeding operation once — then share the responsibility with the people you choose.

- Try it free for 14 days with no commitment — the breeding add-on is SEK 79 (approx. €7) per month.
